Matt Dodge

Hands-on software technology leader who thrives in fast-paced environments

---- PROFESSIONAL EXPERIENCE -----

LoanSnap — Director of DevOps & IT

JUL 2019 - PRESENT

A series B fin-tech company in the mortgage industry focused on saving people money and streamlining the mortgage lending process

- Responsible for the uptime and security of our full software stack which runs on Kubernetes in Amazon Web Services (AWS)
- Organized all cloud environments with infrastructure-as-code using Terraform, Ansible, and Kustomize
- Managed several teams consisting of DevOps engineers, IT technicians, & internal customer support reps
- Managed a \$3M+ annual software, cloud, and SaaS budget
- Implemented a containerized and autonomous CI/CD pipeline system used for dozens of software products; built with Concourse CI
- Converted an organization of 100+ desktop/in-office employees to a laptop-equipped and remote workforce
- Made regular development contributions for performance improvements, bug fixes, and new features to our Python and JavaScript codebases
- Migrated a \$10k/mo Google Cloud implementation to AWS with zero downtime
- Created a series of web apps used by internal non-technical teams to automatically view and manage our applications using Retool
- Designed and maintained 80+ marketing automation pipelines in **Braze**
- Represented the corporation for IT/technical concerns on dozens of state audits, partner audits, and compliance procedures

niolabs — CTO, Founder

JUL 2013 - JUN 2019

A series A startup focused on making distributed systems and Internet of Things implementations easier for technical and non-technical users

- Architected and developed the core software product a distributed platform built on **Python**
- Automated and secured our on-premise and cloud infrastructure with Terraform, Kubernetes, and Jenkins
- Created numerous Internet of Things architectures, implementations, and technical deliverables across many industries. Deployed to thousands of devices using Ansible and SaltStack
- Grew company revenue of licenses and services to over \$5M per year
- Managed the engineering team 20 developers & engineers spanning back-end (**Python**), front-end (**JavaScript/React**), and hardware
- Led an initiative for our company to contribute over 1,000 hours to open-source and community development in 2018
- Performed live demos and pitched investors and potential clients/partners. Acted as primary technical contact for seed round and series A round investments

---- SKILLS -----

Full-stack software development

DevOps and cloud infrastructure management

Team building and people management

Securing data and protecting sensitive customer PII

Client services and customer interaction

Interviewing, hiring, recruitment, and contractor management

---- ASK ME ABOUT -----

Empowering non-technical teams to work with technical products

Growing a software development team from 0 to 20

Securing and protecting sensitive data and customer PII

Contributing to and utilizing the open-source community in a secure way

Properly utilizing OKRs to drive priorities

Enabling team members to have work/life balance

Creating a practical and effective interview process for developers

Marketing and pricing enterprise software in a nascent market

Creating a confident development and deployment culture

---- PROFESSIONAL EXPERIENCE (contd.) --------- TECH PROFICIENCY -----**Deloitte** — Systems Integration Consultant ● ● ● ● Python JUL 2010 - JUL 2013 A global management and strategy consulting and audit firm - I was part ● ● ● ● Javascript/React of the Systems Integration group within the Consulting practice • Led the Data Migration team of a state government project to migrate ● ● ● ● AWS court case data to a more modern system. Utilized **TIBCO** DataExchange ● ● ● Google Cloud to perform ETL on Oracle and MySQL databases • Automated quality and stress testing scripts for a team of developers and O O O O Kubernetes testers on a Java web application ● ● ● ● Terraform • Created a Python/JavaScript software product to improve a major retailer's supply chain processes and enable real-time awareness ● ● ● MySQL • Managed a stress testing team that used automation to simulate load on a O O O Postgres web-based product ● ● ● ● Linux HotelReservations.com — Software Engineer JUN 2008 - JUN 2010 ● ● ● ● Docker An online marketing firm focused on driving traffic to hotel and vacation booking sites through advertisements and search engine marketing React Native • Managed MSSQL/SQL Server inventory databases and ingestion of listing ● ● ● Ansible updates from various providers • Automated advertisement bidding strategies with a custom PHP ● ● ● TypeScript application for search engine ads in a highly competitive industry • Developed JSP sites/landing pages for hotel listings with dynamic pricing ● ● ● VueJS • Created automation tools for managing, updating, and publishing ads to O O Jenkins multiple search engine platforms simultaneously Networking ---- SIDE HUSTLES —----• Java **XW Stats** — Personalized statistics about NYT crossword solves Go A free web app where New York Times crossword subscribers can see deep PHP statistics about how fast they solve crossword puzzles. This is a solo project that I built from scratch and grew to over 700 active users in less ● ● ● Bash than 1 year. To date the app has processed and analyzed over 400,000 individually solved puzzles. ● ● ● ● Django https://xwstats.com

Verge Golf — Tour-level insights and performance tracking

A freemium web and mobile app for golfers to record scores and glean insights about specifics in their golf game. The app provides all golfers access to an advanced metric, strokes gained, that is typically only available to professionals. I performed all of the development work on the product and a colleague completed the design/UX work.
